

This is incorrect. Do not unfold silicone edging

Start with one corner.
Sewn edge of silicone goes in first

Put in 5-6" before going to diagonal corner

Once first corner is in go to diagonal corner and repeat

3rd- stick in opposite side corner

4th-stretch fabric to get the last corner in. This should be a snug fit

Lastly push in the middles of each side and work your way outwards

Push the corners in with any key if necessary

Fabric should be snug, almost as if you could bounce a quarter
